Doorbraak In Het Oosterscheldebeleid:

Rijkswaterstaat on the horns of a dilemma, 2009 On the one hand it needed its renowned expert status to fulfil its public responsibilities **Policy Analysis in the Netherlands** Frans van Nispen, Peter Scholten, 2018-03-01 This comprehensive study part of the International Library of Policy Analysis edited by Iris Geva May and Michael Howlett brings together for the first time a systemic overview of policy analysis activities in the Netherlands The Netherlands is internationally regarded as one of the front runners of policy analysis and evaluation in Europe This book provides a much needed overview of developments in policy analysis in both academia and practice at various levels of governance It brings together contributions from key scholars as well as from professionals in the field The book captures the diversity of modes of policy analysis which have evolved since the 1970s Above all it provides an overview of the current state of affairs and is as such suitable for anyone who is interested in governance and performance Features of the ILPA series include a systematic study of policy analysis systems by government and non governmental actors a history of the country's policy analysis empirical case studies and a comparative overview a key reference collection for research and teaching in comparative policy analysis and policy studies Managing Environmental Disputes P. Glasbergen, 2012-12-06 The concept of sustainable development is a source of inspiration for many who see it as a call to cooperative action In practice however policies intended to further this goal often generate conflicts of interest The ensuing disputes occur among governmental organizations but disputes also arise between public authorities private interest groups and the environmental movement In the opinion of the authors the fact that environmental policy can provoke such conflict may be attributed largely to decision making procedures in our society Accordingly the authors are convinced that a new approach to managing environmental disputes is needed in order to deal effectively with environmental problems Indeed this book presents a viable alternative which is called network management **Guardians of Public Value** Arjen Boin, Lauren A. Fahy, Paul 't Hart, 2020-11-12 This open access book presents case studies of twelve organisations which the public have come to view as institutions From the BBC to Doctors Without Borders from the Amsterdam Concertgebouw Orchestra to CERN this volume examines how some organisations rise to prominence and remain in high public esteem through changing and challenging times It builds upon the scholarly tradition of institutional scholarship pioneered by Philip Selznick and highlights common themes in the stories of these highly diverse organizations demonstrating how leadership learning and luck all play a role in becoming and remaining an institution This case study format makes this volume ideal for classroom use and practitioners alike In an era where public institutions are increasingly under threat this volume offers concrete lessons for contemporary organisation leaders *Water Policy Entrepreneurs* Sander Meijerink, 2009 Unsurpassed in the scope of its coverage this book explores like no other the roles of policy entrepreneurs and the causes of policy change across diverse political systems ranging from the developing world to the largest western democracies The studies show how entrepreneurs work with outside donors take

advantage of windows of political opportunity create those windows and push the policy process in the direction they hope. They also show the limits to these strategies and strategies that tend to fail. The book dramatically advances our understanding not only of change and stability in water policy but of the policy process more generally. Frank R Baumgartner, University of North Carolina, US. This book is a theoretically and empirically grounded analysis of one of the world's most pressing problems: the management of water resources. The editors have assembled a remarkable collection of authors with a truly global outlook and an excellent grasp of contemporary water issues as well as modern theories of public policy and decision making. The volume also demonstrates excellent applications of policy theory to current and pressing matters. It is a must read for students and practitioners in water resources and will be influential to water policy and in environmental resource management and policy for years to come. Thomas A Birkland, North Carolina State University, US. This volume is a major achievement. It advances our knowledge of stability and change in water policy through case studies from around the world. Its focus on transitions: instances of really major shifts in policy is particularly welcome at a time when challenges such as climate change force water policy makers to reconsider the very foundations of their regulatory frameworks and infrastructural policies. The volume goes beyond water policy, however. It makes a major contribution to the study of policy dynamics in general by offering an empirically grounded comparative analysis of policy entrepreneurs as change agents in policy networks. There has been much loose talk about policy entrepreneurs in the fields of public administration and public policy but a dearth of empirical work underpinning the various claims made. This volume goes a long way towards filling that gap. Highly recommended for water experts and policy scientists alike. Paul t Hart, Australian National University, Australia and Utrecht University, the Netherlands. This major volume focuses on the role of policy entrepreneurs in revolutionizing water management worldwide. Adopting an international comparative perspective, the authors explore the changes taking place in water policy across fifteen countries at both the global level and within the European Union. Their analysis highlights the importance of groups and individuals in stimulating progress and reveals the crucial part played by policy entrepreneurs. Successful entrepreneurs use various strategies to initiate and implement change, including the framing and reframing of issues, the assembly of coalitions, venue shopping, and the exploitation of windows of opportunity. In showcasing the role of entrepreneurs in achieving transitions and explaining their approach, this groundbreaking book presents an optimistic message for those who desire improvements in the way water is managed. This book will not only make a unique contribution to the current literature on transition management but will also prove an invaluable tool for those keen to influence water policy management at the regional, national, and international level. It will be of great interest to students and scholars of water resources and environmental management and governance as well as practitioners in the fields of water and climate policy.
