Kropfli,1977 **Micro-doppler Radar and Its Applications** Francesco Fioranelli,Hugh Griffiths,Matthew Ritchie,Alessio Balleri,2020 This book covers the latest developments in radar micro Doppler signatures and noncooperative recognition of moving targets for researchers and advanced students of radar systems Micro Doppler signatures is a very broad topic with applications in healthcare security and surveillance Edited by leading researchers in the field the book consists of a series of chapters with contributions from different groups of authors who are international experts on their topics The following topics are covered multistatic radar micro Doppler passive radar approaches for healthcare sparsity driven methods for micro Doppler detection and classification deep neural networks for radar micro Doppler signature classification classification of personnel for ground based surveillance multimodal sensing for assisted living using radar micro Doppler analysis of ballistic targets small drones and bird signatures as emerging targets hardware development and applications of portable FMCW radars digital IF CW Doppler radar and its contactless healthcare sensing L1 norm principal component and discriminant analyses of micro Doppler signatures for indoor human activity recognition and micro Doppler signature extraction and analysis for automotive application Finally the editors have written a concluding short chapter that brings together an overview of the field and discusses likely future trends **Range-Doppler Radar Imaging and Motion Compensation** Jae Sok Son,Gabriel Thomas,Benjamin C. Flores,2001 Learn the newest processing techniques for focusing radar images with this important new book It helps you master the SAR ISAR fundamentals that are critical to understanding motion compensation and advanced SAR ISAR imaging techniques and gives you the background you need to tackle problems such as estimating motion parameters by phase analysis compensating the phase of a wideband signal and processing a wideband signal into a radar image **Polarimetric Doppler Weather Radar** V. N. Bringi,V. Chandrasekar,2001-08-30 This 2001 book provides a detailed introduction to the principles of Doppler and polarimetric radar focusing in particular on their use in the analysis of

weather systems The design features and operation of practical radar systems are highlighted throughout the book in order to illustrate important theoretical foundations The authors begin by discussing background topics such as electromagnetic scattering polarization and wave propagation They then deal in detail with the engineering aspects of pulsed Doppler polarimetric radar including the relevant signal theory spectral estimation techniques and noise considerations They close by examining a range of key applications in meteorology and remote sensing The book will be of great use to graduate students of electrical engineering and atmospheric science as well as to practitioners involved in the applications of polarimetric radar systems

The Feasibility of Detecting Shock Waves by Pulse Doppler Radar Kenneth M. Glover, 1966 Classical geometric optics estimates of the echo characteristics from both isotropic and directed acoustic shocks are presented together with the detection capability of a typical sensitive pulse Doppler radar AFCRL Porcupine Doppler in order to determine the feasibility of detecting large well defined boundaries of refractive index Both the radar cross section and the Doppler spectrum of an acoustic shock are sensitive to wind and temperature induced perturbations of the shock surface For standard deviations in wind and temperature of 0.5 m/sec and 1°C the theoretical values of the maximum radar cross section and minimum Doppler spectral width of a typical directed shock of 50 meters radius are found to be 0.0008 sq cm and 58 cps respectively This target cross section is about 6 dB stronger than the minimum cross section detectable by the Porcupine radar at a range of only 1.8 kilometers At this range the presence of a weak signal may be completely masked by the presence of strong ground clutter signals Signal processing techniques which improve the mean square to noise ratio and provide sub clutter visibility are therefore crucial to the success of the experiment Moreover the sensitivity of the radar cross section and the Doppler spectrum to wind and temperature perturbations restricts the experiments to calm conditions Author
