Existential Cognition Computational Minds In The World:

Existential Cognition Ron McClamrock, 1995-03-15 While the notion of the mind as information processor a kind of computational system is widely accepted many scientists and philosophers have assumed that this account of cognition shows that the mind's operations are characterizable independent of their relationship to the external world Existential Cognition challenges the internalist view of mind arguing that intelligence thought and action cannot be understood in isolation but only in interaction with the outside world Arguing that the mind is essentially embedded in the external world Ron McClamrock provides a schema that allows cognitive scientists to address such long standing problems in artificial intelligence as the frame problem and the issue of bounded rationality Extending this schema to cover progress in other studies of behavior including language vision and action McClamrock reinterprets the importance of the organism environment distinction McClamrock also considers the broader philosophical question of the place of mind in the world particularly with regard to questions of intentionality subjectivity and phenomenology With implications for philosophy cognitive and computer science AI and psychology this book synthesizes state of the art work in philosophy and cognitive science on how the mind interacts with the world to produce thoughts ideas and actions Cognitive Systems and the Extended Mind

Robert D. Rupert, 2009-08-19 Cognitive Systems and the Extended Mind surveys philosophical issues raised by the situated movement in cognitive science that is the treatment of cognitive phenomena as the joint products of brain body and environment **Young Minds in Social Worlds** Katherine Nelson, 2010-03-30 Katherine Nelson re centers developmental psychology with a revived emphasis on development and change rather than foundations and continuity She argues that children be seen not as scientists but as members of a community of minds striving not only to make sense but also to share meanings with others A child is always part of a social world yet the child's experience is private So Nelson argues we must study children in the context of the relationships interactive language and culture of their everyday lives Nelson draws philosophically from pragmatism and phenomenology and empirically from a range of developmental research Skeptical of work that focuses on presumed innate abilities and the close fit of child and adult forms of cognition her dynamic framework takes into account whole systems developing over time presenting a coherent account of social cognitive and linguistic development in the first five years of life Nelson argues that a child's entrance into the community of minds is a slow gradual process with enormous consequences for child development and the adults that they become Original deeply scholarly and trenchant Young Minds in Social Worlds will inspire a new generation of developmental psychologists
