Walther Nernst, 2016-09-09 Excerpt from *Experimental and Theoretical Applications of Thermodynamics to Chemistry* The study of the results thus far obtained in this field makes it appear probable that there prevails here more conformity to general laws than the two laws of thermodynamics would lead us to expect To explain these regularities I have developed a new theorem which seems to reveal new truths concerning the relation between chemical energy and heat It can hardly be doubted that this theorem will prove useful in the treatment of questions other than purely chemical but in the following Lectures I have not entered into this phase of the subject About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works      **Experimental and**
