Experiments in Topology William Wilson Lambert, 1964 **Comparison of Statistical Experiments** Erik Torgersen, 1991-03-14 There are a number of important questions associated with statistical experiments when does one given experiment yield more information than another how can we measure the difference in information how fast does information accumulate by repeating the experiment The means of answering such questions has emerged from the work of Wald Blackwell LeCam and others and is based on the ideas of risk and deficiency The present work which is devoted to the various methods of comparing statistical experiments is essentially self contained requiring only some background in measure theory and functional analysis Chapters introducing statistical experiments and the necessary convex analysis begin the book and are followed by others on game theory decision theory and vector lattices The notion of deficiency which measures the difference in information between two experiments is then introduced The relation between it and other concepts such as sufficiency randomisation distance ordering equivalence completeness and convergence are explored This is a comprehensive treatment of the subject and will be an essential reference for mathematical statisticians *Proceedings of the Seventh Conference on Probability Theory* Marius Iosifescu, Șerban Grigorescu, Tiberiu Postelnicu, 2020-05-18 No detailed description available for *Proceedings of the Seventh Conference on Probability Theory* [Eighth IEEE International Symposium on Distributed Simulation and Real-Time Applications](#) Stephen J.
