Making Renewable Energy FiT Ian P. Boisvert, Ivan Lieben, 2012 Of all countries Germany has the world s highest amount of installed solar power That is a direct result of implementing Feed In Tariffs FiTs FiTs are government mandated long term purchase contracts offered to renewable energy generators at wholesale rates that return to them the cost of installation plus a reasonable profit Among all competing policies FiTs are the most effective and efficient at deploying renewable energy Unlike Germany and to a growing extent Spain FiTs are not widely used in the United States notwithstanding a desire to promote renewable energy Where states have tried something like FiTs the results are discouraging because their FiTs lack necessary components Moreover the federal structure and complex electricity laws lessen the possibility of widespread FiT adoption in the US To resolve these difficulties we propose creating a FiT Certification Board FCB to certify FiT programs as meeting minimum elements necessary for an effective FiT We draw from the German and Spanish experiences to determine the minimum elements and necessary components to guide certification In turn the FCB could help unleash renewable energy deployment in the U S

The Dirty Energy Dilemma Benjamin K. Sovacool, 2008-10-30 The American electric utility system is quietly falling apart. Once taken for granted, the industry has become increasingly unstable, fragmented, unreliable, insecure, inefficient, expensive, and harmful to our environment and public health. According to Sovacool, the fix for this ugly array of problems lies not in nuclear power or clean coal, but in renewable energy systems that produce few harmful byproducts, relieve congestion on the transmission grid, require less maintenance, are not subject to price volatility, and enhance the security of the national energy system from natural catastrophe, terrorist attack, and dependence on supply from hostile and unstable regions of the world. Here arises The Dirty Energy Dilemma. If renewable energy systems deliver such impressive benefits, why are they languishing at the margins of the American energy portfolio? And why does the United States lag so far behind Europe, where conversion to renewable energy systems has already taken off in a big way? Corporate media parrot industry PR that renewable technologies just aren't ready for prime time. But Sovacool marshals extensive field research to show that the only barrier blocking the conversion of a significant proportion of the U.S. energy portfolio to renewables is not technological; the technology is there, but institutional. Public utility commissioners, utility managers, system operators, business owners, and ordinary consumers are hobbled by organizational conservatism, technical incompatibility, legal inertia, weak and inconsistent political incentives, ill-founded prejudices, and apathy. The author argues that significant conversion to technologically proven clean energy systems can happen only if we adopt and implement a whole new set of policies that will target and dismantle the insidious social barriers that are presently blocking decisions that would so obviously benefit society.

The Cost of Electricity Paul Breeze, 2021-02-28 The Cost of Electricity is an essential tool for any researcher or practitioner seeking to establish the economic and environmental cost of power generation and thereby to analyse the economic feasibility of power systems. Chapters cover capital cost, fuel cost, levelised cost, subsidies, and tariffs; lifetime emission analysis; net energy analysis; traditional generation costs; and renewable generation costs. The work is based on published analyses of generation costs and generation cost predictions from trusted organisations such as the US Energy Information Administration and the IEA. Chapters proceed in a logical manner through cost factors before concluding with the current and future cost of electricity generation. Analyses the factors that contribute to the cost of generating electricity together with the presentation of historical cost trends and predictions for future costs. Examines the environmental cost of power generation by lifecycle analysis, including carbon emissions impact. Reviews factors which distort the market cost of electricity.

Global methane pledge in Tajikistan: Assessment report Malec, Karel, Babu, Suresh Chandra, Tohirzoda, Sino, 2024-02-27 The Government of Tajikistan should consider joining the Global Methane Commitment as a strategic and prudent decision. Tajikistan's participation in the Global Methane Pledge offers numerous benefits that can positively impact the country's economy, environment, and global reputation. By joining this international effort to reduce methane emissions, Tajikistan can contribute to global climate change mitigation goals, demonstrating its commitment to addressing environmental challenges. This

commitment becomes particularly significant for Tajikistan's agrarian economy where sustainable livestock management practices can help reduce methane emissions from enteric fermentation enhancing both environmental sustainability and agricultural efficiency. Additionally, the pledge emphasizes improved waste management and methane capture from solid waste sites aligning with Tajikistan's green energy objectives, carbon market participation, revenue generation and attracting international investments. Importantly, joining the Global Methane Pledge involves no legal obligations or penalties, offering Tajikistan a flexible and supportive framework for collaboration, knowledge sharing, funding access and effective methane reduction measures implementation. Targeting main sources of methane emissions provides an opportunity to implement cost-effective measures that yield multiple benefits including improved air quality, reduced health risks from air pollution, enhanced energy efficiency, increased energy security and the development of sustainable technologies and industries that foster economic growth and job creation. It is recommended that comprehensive studies be undertaken within each of the sub-sectors such as agriculture, energy, waste management and wastewater management. These studies will not only provide valuable insights to inform effective interventions but also provide a basis for future research and data-driven decision making. It is also important to highlight that some measures can lead to cost avoidance in the long run. By focusing on mitigating methane emissions, Tajikistan can actively contribute to global climate change mitigation while reaping numerous positive outcomes for its environment, public health and economy. To determine the effects of measures, effective measurement is needed. Tajikistan has been improving the management and use of statistical data in recent decades as its Agency for Statistics under the President of the Republic of Tajikistan, TajStat, works closely with regional and international partners to improve data quality and reporting. However, the agency needs additional human and financial resources to support the collection of climate data and the development of indicators to monitor progress and to support sound policy decisions.

World Energy Outlook, 2011 [Renewable Energy, Medium-term Market Report ...](#), 2012 **Renewable Power in California : Status and Issues**, 2011 *Energy Prices and Taxes*, 2012 **Renewable Energy Medium-term Market Report 2012** International Energy Agency, 2012. As the fastest growing sector and accounting for around a fifth of worldwide electricity production, renewable energy has emerged as a significant source in the global mix. Much of this success has stemmed from significant policy effort and economic incentives at the country level, particularly in the OECD. Massive investment has taken place on a global scale with costs for most technologies falling steadily. As a result, renewable energy technologies are becoming more economically attractive in an increasing range of countries and circumstances, with China, India and Brazil emerging as major deployment grounds. Going forward, the continued growth of renewable energy will depend upon the evolution of policy and market frameworks. Yet, further technology development, grid and system integration issues and the availability of finance will also weigh as key variables. This new annual IEA publication, *Medium Term Renewable Energy Market Report 2012*, provides a key benchmark assessing the current state of play of renewable energy.

identifying the main drivers and barriers to deployment and projecting renewable energy electricity capacity and generation through 2017 Starting with an in depth analysis of key country level markets which represent 80% of renewable electricity generation today the report examines the prospects for renewable energy finance and provides a global outlook for each renewable electricity technology The report analyses enablers and barriers to renewable energy deployment in detail examining larger electricity market issues that have implications for renewable development including country level demand projections anticipated changes in conventional generating capacity and power system integration

READY: Renewable Energy Action on Deployment IEA-RETD, Rolf de Vos, Janet Sawin, 2012-12-31 Are you developing strategies for a future sustainable energy supply Are you designing policies to deploy renewable energy technologies in your country Are you looking for new tools and measures to make your policies more effective Are you planning to make decisions on renewable energy investments in certain countries and are you checking their policy robustness Let the IEA guide you into successful efficient and effective policies and decisions for accelerating deployment of renewable energy Learn about the six policy actions that are essential ingredients for your policy portfolio Alliance Building Communicating Target Setting Integration in economic policies Optimizing existing instruments and Neutralizing disadvantages on the playing field This book shows why and how successful renewable energy strategies work Many recent and actual examples of best cases and experiences in policies based on literature and interviews show how policies can best mobilize national and international renewable energy business and the financial institutions while creating broad support The book is an initiative of the IEA RETD an international agreement between nine countries to investigate and accelerate the deployment of renewable energy deployment Presents you with a variety of policy options that have been proven to accelerate the deployment of renewable energy technologies Based on experiences around the world at the local regional and national levels Includes the IEA s ACTION star a decision making tool for developing a consolidated renewables policy framework Find inspiration in this guide s depiction of the significant renewable energy developments to date and the many examples of successful policies featured
