Maple V: Mathematics and its Applications Robert J. Lopez, 2012-12-06 The Maple Summer Workshop and Symposium MSWS 94 reflects the growing community of Maple users around the world This volume contains the contributed papers A careful inspection of author affiliations will reveal that they come from North America Europe and Australia In fact fifteen come from the United States two from Canada one from Australia and nine come from Europe Of European papers two are from Germany two are from the Netherlands two are from Spain and one each is from Switzerland Denmark and the United Kingdom More important than the geographical diversity is the intellectual range of the contributions We begin to see in this collection of works

papers in which Maple is used in an increasingly flexible way For example there is an application in computer science that uses Maple as a tool to create a new utility There is an application in abstract algebra where Maple has been used to create new functionalities for computing in a rational function field There are applications to geometrical optics digital signal processing and experimental design

Elementary Principles of Chemical Processes Richard M. Felder, Ronald W. Rousseau, 1986 This introduction to chemical processes lays the foundation for a chemical engineering curriculum It shows beginning students how to apply engineering techniques to the solution of process related problems by breaking each problem down into individual component parts defining the relationships between them and reuniting them in a single solution Providing detailed practical examples with every problem and self test questions at the end of each chapter it uses predominantly SI units in its coverage of theoretical components of an engineering calculation processes and process variables fundamentals of material balances single and multiphase systems energy and energy balances balances on nonreactive processes and more
