1. **Introduction:** The research hypothesis states that there is a significant positive relationship between the use of social media and the frequency of communication. The study aims to explore the impact of social media on communication frequency, considering factors such as age, gender, and usage duration. The research is conducted in a quantitative manner, using a survey of 100 participants. The data is analyzed using statistical methods to determine the strength and direction of the relationship. The findings are expected to provide insights into the role of social media in modern communication patterns.
