Chief of Naval Education and Training, 1984 Fathom , 1999 Bibliography for Advancement Study , 1994 **DDG-51 Engineering Training** Roland J. Yardley, 2009 Much of the training for the engineering watchstanders of Arleigh Burke class destroyers that is currently done underway could be done in port Training could also be done on simulators at considerable savings in time money fuel and ship wear and tear This monograph discusses how training simulator use could improve engineering watchstanders proficiency before ships go to sea reserving time at sea for fine tuning the training **An Examination of Options to Reduce Underway Training Days Through the Use of Simulation** Roland J. Yardley, 2008 U S Navy surface combatant ship crew training involves a combination of shore based onboard pier side and underway training Underway training is expensive however and it increases wear and tear on

operating equipment Furthermore constrained budgets and increasing recapitalization costs have forced the Navy to examine various methods such as increased use of simulators to reduce the annual operating costs of the fleet Technological improvements have increased the fidelity and realism of simulators and simulation is being used more widely for training within the U S Navy in other navies and in commercial shipping companies Although the Navy s surface combatant community currently uses simulators in its training regimen an increased use of simulation could potentially improve training efficiency sustain training readiness and reduce underway days Focusing on the DDG 51 Arleigh Burke class of surface combatants RAND examines the training requirements of surface forces determines where credit is granted for the use of simulation estimates what training is done underway examines simulation technology and identifies areas where simulation could be substituted for underway training without any decrease in readiness The authors find that although most exercises are done underway many could be done in port with or without the use of simulators Accordingly the Navy should consider 1 investing in shore based engineering simulators 2 directing that exercises that can be done in port be done in port and 3 accelerating the upgrades that are slowly providing DDG 51 class ships with an embedded engineering training capability publisher s website

Ready to Answer All Bells David D. Bruhn, 1997 The first American book on shipboard engineering in nearly twenty years this useful reference offers a guiding philosophy to new experienced and prospective engineers Focusing on the art of the engineer rather than the doctrine and regulations that govern the technical side of the billet it helps them be more effective at their jobs Assuming that readers already possess basic knowledge of engineering principles and practices the author sets forth a coherent blueprint to achieve and maintain the level of readiness necessary to support sustained operations at sea This guide provides insights born of the diverse and hard won deckplate experience of former engineer officers aboard a variety of ships and submarines The author and contributors who have served in a number of engineering positions both at sea and ashore include a former commander of a destroyer readiness squadron a former commanding officer of a nuclear powered attack submarine and three officers currently commanding conventional gas turbine or diesel powered surface ships Acknowledging that the always demanding duties and responsibilities of the fleet s engineer officers have become even more challenging in recent years as funds for maintenance and training decrease they emphasize the need for shipboard engineers not only to master technical knowledge but to lead manage and optimize the use of the personnel and material assets available to them Their collective wisdom will help flatten the seemingly overwhelming learning curve that engineers must climb From taking over the department through overhaul to the various evolutions and assessment processes that confirm readiness to deploy to faraway regions of the world this book guides the reader through all the challenges that the engineer officer will encounter striking a balance between current fleet conventions and engineering practices that have stood the test of time Navy Coast Guard and Merchant Marine engineering officers and Navy surface and submarine warfare officers will all benefit from heeding its advice which until now could only be learned through
